

A Short History Of Byzantium

The Enduring Legacy of the Eastern Roman Empire

For more than a thousand years, the Byzantine Empire stood as a bridge between the ancient and the modern worlds. While the Western Roman Empire crumbled in the 5th century, its eastern counterpart continued to thrive, preserving classical knowledge, Christian theology, and Roman law. The story of this remarkable civilization is not merely a sequel to Rome; it is a distinct and fascinating narrative of resilience, faith, and cultural brilliance. A short history of Byzantium reveals a civilization that was, at its core, Roman in its institutions, Greek in its culture, and Christian in its soul. From the glittering mosaics of Ravenna to the mighty walls of Constantinople, the legacy of the Byzantines continues to shape our world in ways both subtle and profound.

The Foundation of a New Rome

The seeds of the Byzantine Empire were sown by the Roman Emperor Constantine the Great. In 330 AD, he dedicated a new capital city on the site of the ancient Greek settlement of Byzantium. This city, which he named **Nova Roma** (New Rome) but which was almost immediately called Constantinople, was strategically located at the crossroads of Europe and Asia. It commanded the trade routes between the Black Sea and the Mediterranean, and its natural harbors and defensible position made it an ideal seat of power.

Constantine's decision was not merely administrative. It was a profound statement about the future of the Roman world. The old capital, Rome, was increasingly difficult to defend and was far from the wealthy provinces of the East. The new city, however, was at the heart of the Empire's economic and military strength. Constantinople was built to impress. It boasted a vast forum, a grand imperial palace, a hippodrome for chariot races, and magnificent churches, most notably the original Hagia Sophia. Crucially, Constantine also embraced Christianity, ending persecution and laying the groundwork for the Christian character of the Empire that would follow.

The Division of the Empire

The Roman Empire was formally divided into Eastern and Western halves after the death of Emperor Theodosius I in 395 AD. While the West descended into a cycle of invasion, economic collapse, and political fragmentation, the East remained relatively stable and prosperous. The last Western Roman Emperor was deposed in 476 AD, a date often cited as the fall of the Roman Empire. For the Eastern Romans, however, the Empire did not fall. They continued to call themselves **Romanoi** (Romans), and their emperor was the sole legitimate successor to Augustus and Constantine. This identity was central to Byzantine self-perception. The term "Byzantine" itself was a later invention of Western historians, used to distinguish the medieval Greek-speaking empire from its ancient Latin-speaking predecessor.

The Golden Age of Justinian

One of the most defining eras in a short history of Byzantium is the reign of Emperor Justinian I (527-565 AD). Justinian was an ambitious and tireless ruler with a grand vision: to reconquer the lost western provinces and restore the Roman Empire to its former glory. He was aided in this monumental task by his brilliant and formidable wife, Empress Theodora, a former actress who became one of the most powerful women in Roman history.

Military Reconquest

Justinian's generals, most notably Belisarius and Narses, launched a series of remarkably successful campaigns. They defeated the Vandals in North Africa, reclaimed the city of Rome from the Ostrogoths, and eventually brought Italy, parts of Spain, and the Balkan provinces back under imperial control. These victories came at a tremendous cost, both financial and human. The wars devastated Italy and exhausted the Empire's treasury, leaving it vulnerable to new threats on its eastern and northern frontiers. Nevertheless, for a brief moment, the Mediterranean was once again a Roman lake.

The Codification of Roman Law

Perhaps Justinian's most lasting achievement was not military but legal. He commissioned a comprehensive codification of Roman law, known as the **Corpus Juris Civilis**. This massive work collected, organized, and clarified centuries of imperial edicts and legal commentaries. It preserved the core principles of Roman jurisprudence and became the foundation of legal systems throughout much of continental Europe. Without the Corpus Juris Civilis, the legacy of Roman law would have been largely lost to the West.

The Construction of Hagia Sophia

Justinian's building program was equally ambitious, and its crowning glory was the construction of the Hagia Sophia (Holy Wisdom) in Constantinople. Built in just under six years, this architectural marvel was a revolution in design. Its massive central dome, seemingly suspended from heaven by a divine hand, created an awe-inspiring interior space flooded with light. Upon entering his completed masterpiece, Justinian is said to have exclaimed, *"Solomon, I have outdone you!"* For nearly a thousand years, Hagia Sophia was the largest cathedral in the Christian world and remains a potent symbol of Byzantine art, engineering, and spirituality.

A Period of Crisis and Transformation

The century after Justinian was a time of great trial. The plague, which had first appeared during his reign, continued to recur, devastating the population. The Empire faced relentless pressure on multiple fronts: the Persian Empire to the east, Slavic and Avar tribes pouring into the Balkans, and later, the sudden and explosive rise of Islam. The Arab conquests of the 7th century permanently stripped the Empire of its richest provinces in Syria, Egypt, and North Africa.

The Empire was forced to transform itself. The old Roman administrative system gave way to a new military-based structure known as the **theme system**. Provinces were reorganized into military districts under the command of a general (strategos), who held both civil and military authority. This system allowed the Empire to field a more mobile and effective army, drawing soldiers from the local population who were granted land in exchange for military service. It was a period of extreme military crisis, but the Byzantines proved remarkably resilient, beating back sieges of Constantinople by the Arabs in 674-678 and 717-718.

The Iconoclast Controversy

No discussion of a short history of Byzantium is complete without addressing the Iconoclast Controversy, a bitter internal conflict that raged for over a century. The debate was over the use of religious images, or icons. Were they holy objects worthy of veneration, or were they idols forbidden by the Ten Commandments?

Emperors like Leo III and Constantine V argued for the destruction of icons, believing they led to idolatry and had provoked God’s wrath. They found support among many clergy, particularly in the eastern provinces, and within the army. On the other side stood the monks and the Patriarch of Constantinople, along with the vast majority of the common people, who cherished icons as windows to the divine. The controversy led to the destruction of countless works of religious art and caused deep divisions within the Church and state. The veneration of icons was ultimately restored, first in 787 and then definitively in 843, an event still celebrated in the Orthodox Church as the "Triumph of Orthodoxy."

The Macedonian Renaissance and the Age of Expansion

The period from the 9th to the 11th centuries, under the Macedonian dynasty, is often considered a second golden age. After centuries of defensive warfare, the Empire went on the offensive. Brilliant soldier-emperors like Nikephoros II Phokas, John I Tzimiskes, and Basil II the "Bulgar-Slayer" reconquered vast territories in the east, including Crete, Cyprus, and parts of Syria and Armenia. Basil II’s ruthless campaigns, which included the blinding of thousands of captured Bulgarian soldiers, earned him his grim epithet but also secured the northern frontier for generations.

This era also witnessed a flourishing of art, literature, and learning. The **Macedonian Renaissance** saw a revival of classical scholarship, the production of magnificent illuminated manuscripts, and the creation of exquisite ivory carvings and enamelwork. The missionary activity of Saints Cyril and Methodius, who created the Glagolitic alphabet (a precursor to Cyrillic), brought Christianity and literacy to the Slavic peoples, permanently extending Byzantine cultural and religious influence into the Balkans and Russia.

The Great Schism and the Crusades

The relationship between the Church of Rome (the West) and the Church of Constantinople (the East) had been strained for centuries over theological, political, and cultural differences. The question of papal authority, the use of unleavened bread in the Eucharist, and a single word in the Nicene Creed (the *filioque* clause) were points of bitter contention. In 1054, the tensions boiled over. Papal legates and the Patriarch of Constantinople mutually excommunicated each other in an event known as the **Great Schism**. This formal break between the Roman Catholic and Eastern Orthodox churches has never been fully healed.

The arrival of the Crusades initially seemed like an opportunity for cooperation. The Byzantine Emperor Alexios I Komnenos called for Western military aid against the Seljuk Turks, who had inflicted a devastating defeat on the Byzantines at the Battle of Manzikert in 1071. However, the relationship between the Crusaders and the Byzantines quickly soured. The heavily armed and often unruly Western knights viewed the Byzantines with suspicion and contempt, accusing them of duplicity and weakness. The Byzantines, in turn, saw the Crusaders as dangerous and unreliable barbarians.

This mutual distrust culminated in the greatest catastrophe in Byzantine history: the Fourth Crusade. In 1204, the Crusaders, diverted from their original goal of Egypt, were persuaded by the Venetians to attack Constantinople. They breached the mighty walls, sacked the city with shocking brutality, and divided the Empire among themselves. The sacred treasures of Hagia Sophia were stolen, altars were smashed, and the city was put to the torch. The event sent shockwaves throughout the Christian world and left a deep and lasting legacy of bitterness between East and West.

Exile and Restoration

For nearly 60 years, the Byzantine Empire existed in exile. Three successor states emerged: the Empire of Nicaea, the Despotate of Epirus, and the Empire of Trebizond. The most successful of these was the Empire of Nicaea, which carefully rebuilt its military, economy, and church hierarchy. Its rulers, the Laskarid dynasty, nurtured a revival of learning and culture, biding their time.

In 1261, the Nicaean general Michael VIII Palaiologos recaptured Constantinople, restoring the Byzantine Empire. The city he returned to was a shadow of its former self. The palaces were dilapidated, the population had plummeted, and the treasury was empty. The restored Empire under the **Palaiologan dynasty** was a poor, small, and increasingly vulnerable state, struggling to survive amid a sea of enemies. Yet, this final period also witnessed a remarkable artistic and intellectual flowering, a "Palaiologan Renaissance" known for its emotionally expressive frescoes and mosaics, seen in churches like the Chora Monastery in Constantinople.

The Final Fall

The last two centuries of Byzantine history are a story of slow, inexorable decline. The Empire was squeezed between the expanding Serbian kingdom in the Balkans and, more dangerously, the rising power of the Ottoman Turks in Anatolia. The Byzantines made desperate pleas for help to the West, even agreeing, at the Council of Florence in 1439, to the union of the churches in a vain attempt to secure military aid. However, the union was widely rejected by the Byzantine population, who famously stated, "*Better the Sultan's turban than the Pope's tiara.*"

The final siege of Constantinople began in April 1453. The Ottoman Sultan **Mehmed II**, known as "the Conqueror," assembled a massive army and a formidable fleet. He brought with him a giant bombard, a cannon capable of hurling massive stone balls against the ancient Theodosian Walls, which had

protected the city for over a thousand years. The Byzantine Emperor Constantine XI Palaiologos commanded a tiny garrison, numbering perhaps 7,000 men, including a contingent of Venetian and Genoese volunteers. For 53 days, they held out against overwhelming odds.

On the early morning of May 29, 1453, the Ottomans finally breached the walls. Constantine XI, refusing to surrender, threw himself into the final battle and was killed. His body was never identified.
